

Molina Healthcare Gains Healthy Advantage

Key Challenges

Molina Healthcare needed to ensure uptime for its revenue-generating claims engine while finding a quicker way to identify, respond to and resolve security and IT incidents.

Key Results

The Molina team now uses Splunk to resolve issues in minutes, slashing IT incidents, boosting claims engine uptime and eliminating hours spent coordinating with various cross-functional teams and tools.

Industry: Healthcare

Solutions: IT Operations

Molina Healthcare's story began over 35 years ago.

Originally founded to assist underserved individuals in the Long Beach community, Molina Healthcare has grown to become a Fortune 500 multistate healthcare organization.

As it tackles many challenges associated with rapid growth, the company continually strives to find the best ways to apply people, processes and technologies to provide excellent health care services.

Imagining a Better Future State

Molina Healthcare arranges healthcare services delivery and offers health information management solutions to individuals and families who receive care through government health plans including Medicare, Medicaid and other government-funded programs. From an operational standpoint, the company is experiencing an explosion of data and has been working to classify, understand and apply actionable data so that the business runs efficiently and customers are well-served.

At Molina, the Enterprise Infrastructure Services team is responsible for designing, building and engineering the company's infrastructure platforms, from databases down to the network. Previously, the team had expensive and disparate enterprise IT operations monitoring tools. When an IT issue occurred, the team had to call in various groups and look at several tools to try to figure out, through a process of elimination, where an issue resided. Troubleshooting was ad hoc, and the team had no way to prioritize investigations based on business priorities.

What's more, the company lacked a real-time view of its data across the enterprise including its claims engine, which is the lifeblood of the company. When the claims engine broke or took time to restore service there was a negative revenue impact. "We went through a tools rationalization exercise and compared what the future state would look like versus where we were with our tools landscape, and the financial payout with Splunk® Enterprise and Splunk® ITSI was immediately apparent," says Ben Gordon, VP of Enterprise Infrastructure Services. "Trying to implement something similar with legacy tools would have required lots of time and millions of dollars in professional services and upgrades."

Data-Driven Outcomes

63%

reduction in Molina's MTTR

1/5

the number of IT incidents after using Splunk

4.2M

individuals benefiting from better healthcare services, thanks to Molina's ability to mine data and understand trends

Enterprise Data Analytics Platform Built to Scale

Previously, staff spent hours on the phone trying to resolve IT issues that now are typically resolved in minutes with the Splunk® platform. Molina has gained visibility and correlation across its stack, which has reduced the number of IT incidents fivefold and mean time to resolution by 63 percent. The Enterprise Infrastructure team has been able to decommission many tools, and now depends primarily on Splunk Enterprise and Splunk ITSI running on high-performance, high-density Cisco hardware. Gordon explains that the Operational Intelligence provided by the Splunk platform will help solve Molina's growth challenges by focusing the teams, enabling automation, providing easy-to-use analytics and scaling better with the business.

The team relies on many out-of-the-box Splunk ITSI dashboards focusing on the top 50 services, providing insight into infrastructure and application availability, performance and key performance indicators. Team members also have begun building custom dashboards, including one providing near real-time storage capacity monitoring so the company can execute a buy at the appropriate time.

It's important to get the right visibility so we can be more efficient and drive our costs down. This ties back to that singular vision of taking care of the underserved individuals in the community."

Ben Gordon, Vice President of
Enterprise Infrastructure Services,
Molina Healthcare

Tracking Complex Healthcare Ecosystem

Within the complex healthcare and technology ecosystem, Splunk ITSI enables Molina to visually represent and follow important business processes in the company. By mining big data, Molina is gaining insights into why people join or leave its healthcare plans. The company is also identifying trends concerning sepsis and the other important yet costly healthcare issues. Splunk software is playing a vital role in enabling Molina to move away from manual processes, aligning IT with the business, helping to increase member retention and provide more valuable services.

Trying to implement something similar with legacy tools would have required lots of time and millions of dollars in professional services and upgrades."

Ben Gordon, Vice President of
Enterprise Infrastructure Services,
Molina Healthcare

"We were looking for a single pane of glass and the ability to track transactions through all the systems," Gordon says. "With Splunk ITSI, we can now track our member interaction all the way through every system in the service stack. Splunk ITSI has made troubleshooting effortless and collaborative."

Moreover, Gordon notes that Splunk offers a flexible platform that can adjust to any type of machine data, providing flexibility as the company expands and adds in new data sources. Everything is integrated together seamlessly, from the application level down to the network and claims engine, giving everyone from the business to developers and operational staff complete end-to-end data visibility.

"It's important to get the right visibility so we can be more efficient and drive our costs down," Gordon concludes. "This ties back to that singular vision of taking care of the underserved individuals in the community and making sure we do it with a high regard for the financial stewardship of the company."

Download Splunk for free or get started with the free cloud trial. Whether cloud, on-premises, or for large or small teams, Splunk has a deployment model that will fit your needs.
